Skill Profiles

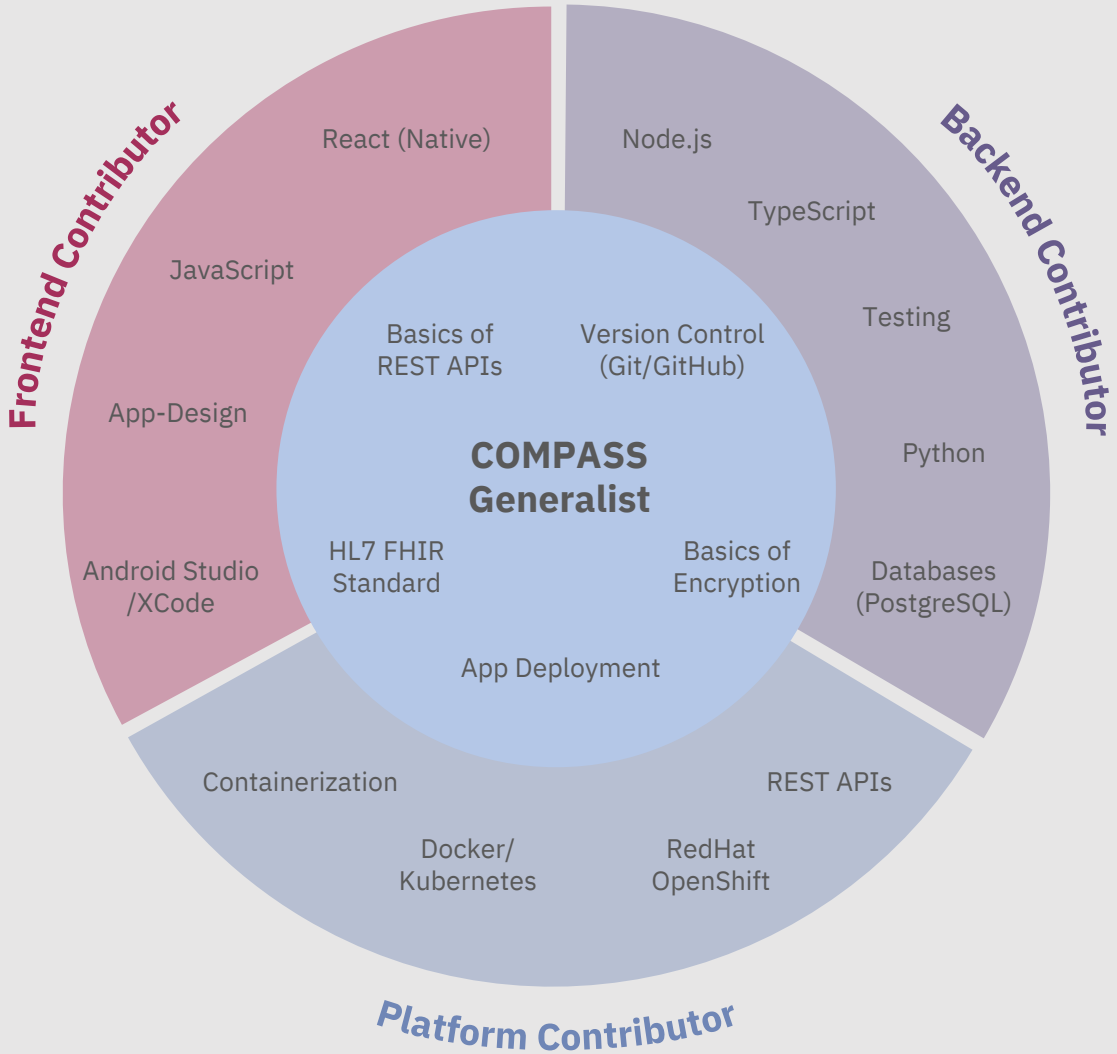
Everyone interested is welcome to participate in the **NUM COMPASS Open-Source project**!

For a better classification of our participants, we have defined **4 skill profiles.**

Ideally you have a **basic understanding or affinity** for the contents of the respective profile. The most important contents are taught in our **enablement sessions or through self-study.**

You don't have to be an expert in all these topics, so please **don't be afraid to join!**

The **Generalist** role is aimed at everyone who does not consider themself a technical participant, but wants to **understand the bigger picture** and **deploy the developed app**. Some sessions from the other tracks might still be interesting for you.



Enabling Sessions

Session **Registration** via Meetup

Please always register for the event, so that we know how many people will join.

Recordings available on YouTube

Questions via Meetup or GitHub

Post **organizational** questions as comments on **Meetup** events.

Create an issue in one of the **Git** repositories for **technical** topics.
